

# CarniTec Liquid

Provides Muscular Energy By Burning Fat And Helps Maintain Health!

L-Carnitine is classified as an amino acid, although it is not an amino acid in the classic sense. Amino acids are generally used by the body for protein synthesis and/or as a neurotransmitter. Carnitine (actually more closely related to the B vitamins) is primarily used to facilitate the transport of long-chain fatty acids into the mitochondria of cells for energy production.

This process provides muscular energy by burning fat, and also prevents fatty build-up around vital organs. Natural Carnitine is found primarily in red meats, so vegetarians may need to supplement to ensure healthy levels in their bodies. Our Carnitine is a synthetic product manufactured in a laboratory using bacterial synthesis, and is considered vegetarian due to the absence of any animal sources or by-products.

Directions: As a dietary supplement, take one tablespoon 2 times daily, preferably on an empty stomach.
